

New WOLVER® jerry can

A brand-new jerry can is a unique solution highlighting individual style of Wolver products. 20 L volume is the most suitable packaging design for technical service needs and liquids storage.

1 HDPE recyclable material

Two layered walls reliably secure the contents and survive high-impact environments during storage and transit. Recyclable.

2 Customized user-friendly design.

Convenient shape of the can provides easy handling. The bottom notch keeps the can stable when filling. Carefully selected dimension of the can enables to fit the whole surface area of EPAL.

3 Tight cap

The cap is equipped with a safety tamper evident ring that ensures the content of the can remains sealed and does not leak or infiltrates at long term storage. The safety ring ensures that it cannot be tampered with or opened until it is removed, which is a guarantee for the customer.

4 Air valve

Air valve is an extra lid designed to release trapped air from the can during filling stage and avoid splashes when draining.

5 Quality Protect System

The Wolver Quality Protect System is a unique counterfeit proof system. Each Wolver product contains a unique code for the verification of the product authenticity on a special website.

6 Detailed information

The label contains data of the product compliance with international standards and OEM approvals together with safety measures according to EU regulations

7 Stackable

Special locks make possible to stack up cans on top of each other and ensure safe and stable storage and transportation.

8 Marks & Signs

WOLVER logo mold on the can serves as a visual proof of genuine product. Transparent gauge window allows to check the remaining volume inside. Safety and warning signs for people with sight disability meet EU requirements.
